

Aadarsh Katigi

Boston, MA | 857-395-5681 | katigiaadarshm@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

EDUCATION

University of Massachusetts Boston

Master of Science | Computer Science

Relevant Coursework: Applied Machine Learning, AI, Neural Networks, Distributed Systems, Operating Systems, OOP

Visvesvaraya Technological University

Bachelor of Engineering | Computer Science

Boston, MA

Sep 2023 - May 2025

Belgaum, India

Aug 2017 - Aug 2021

WORK EXPERIENCE

BNY Mellon

Software Engineer

Remote, US

May 2025 - Present

- Delivered **25+ REST APIs** for a post-trade reconciliation gateway for large scale distributed systems, processing **\$2T+** in assets at **99.99% availability** by architecting **Java Spring Boot** microservices on **AWS**.
- Resolved read-latency failures across pipelines ingesting **10TB+ monthly logs**, achieving **sub-50ms** reads by implementing **TTL** and **write-behind** caching with **Redis** over **PostgreSQL** read replicas.
- Raised **JUnit** test coverage from **65%** to **82%** and cut post-deployment defects by **22%** by refactoring modules into testable units with **GitHub Actions** and integrating AI agents (**Claude Code**) for analysis.
- Built a centralized auth service implementing security best practices, cutting login failures by **28%** by designing a stateless **Spring Security** service with **OAuth** and **JWT**.

Power2Peer Inc.

Software Engineer Intern

Boston, MA

Sep 2024 - Dec 2024

- Architected and deployed **2** microservices for order submission and trade matching, processing **\$135M+** in trading volume at **99.99%** availability by designing **Spring Boot** REST APIs deployed on **AWS**.
- Built the **React** portfolio dashboard with live buyer-seller match tracking, cutting trade confirmation time by **40%**, by designing **TypeScript** components with real-time match state updates.
- Enforced zero-trust access across all inter-service boundaries for **100K+** users, cutting unauthorized access incidents by **98%** by implementing **OAuth 2.0** and **JWT**.

Tata Consultancy Services

Software Engineer

Bengaluru, India

Sep 2021 - Jul 2023

- Delivered a horizontally scaled event ingestion system for **200K+** globally distributed print devices, sustaining **2M+** daily telemetry events by designing decoupled **Kafka** consumers in **Spring Boot** with **PostgreSQL**.
- Refactored service routing layer to isolate failure domains, eliminating a recurring cascading outage and recovering **15 hours** of weekly on-call time by rebuilding the routing logic with the **Strategy Pattern**.
- Contributed to technical design and code reviews, reducing rollbacks by **15%** by introducing pre-merge validation gates with **JUnit** and **Mockito** tests in **GitHub Actions** CI/CD pipelines.
- Optimized **AWS** cloud infrastructure, saving **\$20K** monthly by profiling **EC2** utilization over 90-day windows and configuring **Terraform**-managed auto-scaling tied to traffic thresholds.

PROJECTS

DevDuel | <https://github.com/Adarshhhh/devduel>

Boston, MA

- Engineered a real-time **1v1** coding platform supporting **sub-200ms** match synchronization by designing **Spring Boot** backend with **Redis** pub/sub for consistent match state across concurrent sessions.
- Built an interactive **React** frontend with live code editing and dynamic match visualization by developing **TypeScript** components with state management consuming **WebSocket** event streams.
- Integrated **Gemini API**-powered AI opponents with automated code evaluation by designing a scoring pipeline that benchmarked user submissions against AI-generated solutions in real time.

TECHNICAL SKILLS

Languages: Java, Python, C++, C, SQL, JavaScript, TypeScript

Frameworks: Spring Boot, Hibernate, Spring Security, Django, FastAPI, Kafka, React, Next.js, TensorFlow, LangChain

Databases: PostgreSQL, Redis, Elasticsearch, MySQL

Developer Tools: AWS (EC2, S3, EKS, RDS), GCP, Kubernetes, Docker, Terraform, Git, GitHub Actions, JUnit, VS Code

Core Competencies: Distributed Systems, Microservices Architecture, Cloud-Native Development, API Development, System Design, CI/CD, Agile SDLC
